

Geldof is a **leading supplier with global references** for storage tank projects for oil, petrochemicals and biochemicals, and other bulk liquids.

The storage tank solutions range from the delivery of individual **storage tanks** to the erection of large and fully equipped storage **tank terminals**, as well as everything in between. Geldof also offers comprehensive programs for **tank maintenance**.

Off-site built storage tanks

Our scope of supply...

Geldof is fully equipped to engineer and fabricate storage tanks up to about 8,000 m³ off-site, from where they can be shipped for installation at the customer's site.

- The technical solution for each tank is individually conceived and **engineered in house** in order to optimally meet the application's requirements, the project's challenges and the customer's expectations. Tanks are **designed** according to EN12285, EN14015, EN14620, API620, API650, CODRES and DIN4119 codes and standards.
- The **fabrication** area is fully equipped to handle carbon steel, stainless steel, duplex steel and special **materials**. **Volumes** of our off-site built tanks vary from 10 to about 8,000 m³. Larger tanks are always erected on-site. Whether painted, polished or pickled and passivated, Geldof always offers a perfect **finish**.

Off-site assembly

Transportation by ship

Off-site built tank terminal

“Off-site built reduces the delivery time and interference with our customers' normal activities to a minimum.”

- The facility is located along major waterways with access to seaports and equipped with all necessary means of **transport**, quays and facilities, allowing **shipment worldwide**. Geldof's off-site built storage tanks can be **installed** fully dressed, including insulation, ladders, platforms and ancillary appendages at their final location at the customer's site.

...your benefits

- Geldof is a **reliable** partner, defined as much by its brainpower, flexible engineering competency and project management methods as by its state-of-the-art production areas and machinery, its site organization and its proven track record of successful implementations.

└ Numerous references illustrate Geldof's proven track record of success in the delivery of off-site built tank projects worldwide

The off-site construction of storage tanks, in Geldof's controlled work environment, can offer numerous advantages:

- **Reduced delivery time**
- **Limited interference** with normal site activities
- **Guaranteed performance** in delivery, quality and safety, meaning durable solutions using sustainable methods
- **Economic gains** in terms of reduced CAPEX and risk

Geldof is a leading supplier of 'integrated steel solutions' for the storage, handling and processing of bulk solids, liquids and gases. We have a strong reputation in the fabrication of storage tank solutions, dry bulk storage and handling projects, pressure vessels and process equipment, and a range of other engineered solutions that often require a combination of high-level competencies in diverse technical areas.

Geldof has extensive expertise in renewable and conventional energy, storage and transshipment, and serves the oil and gas industries as well as a broad range of other industries.

Engicon nv (Geldof) is part of the **Engicon Group**.

└ Off-site built tank farm

└ Lifting an off-site built tank

└ Full scope project - 14 Off-site built storage tanks and jetty

└ Transportation by ship

└ Installation of off-site built storage tanks

└ Off-site built tank transported from the assembly area to the loading quay
