

Geldof is a **leading supplier with global references** for storage tank projects for oil, petrochemicals and biochemicals, and other bulk liquids.

The storage tank solutions range from the delivery of individual **storage tanks** to the erection of large and fully equipped storage **tank terminals**, as well as everything in between. Geldof also offers comprehensive programs for **tank maintenance**.

Site-erected storage tanks and full scope terminals

Our scope of supply...

Geldof has a proud track record in the engineering and site erection of storage tanks and over the years has grown into a **full scope solutions provider** for the implementation of turnkey tank terminals, including civil works, tank construction, piping, electrical and instrumentation systems, etc.

Major site-built, grass-roots tank terminal

Storage tank with bund wall

Refrigerated liquid ammonia storage tank

“Our value-driven methodology is to use the applications’ requirements, the projects’ challenges and our customers’ expectations as the principal focus.”

- **Volumes** of individual tanks vary from very small to over 100,000 m³, and the total capacity of terminals built by Geldof can reach over 1,000,000 m³.
- Each technical solution is individually conceived and **engineered in house** in order to optimally meet the application’s requirements, the project’s challenges and the customer’s expectations. Tanks are **designed** according to EN12285, EN14015, EN14620, API620, API650, CODRES and DIN4119 codes and standards.
- Steel plates and subassemblies are prepared in our **fabrication** area, which is fully equipped to handle carbon steel, stainless steel, duplex steel and special **materials**.
- Our highly competent project management and powerful **site organization**, equipped with the most advanced erection and assembly tools, can also be strengthened by strategic partnerships and local subcontractors.

...your benefits

- Geldof is a **reliable** partner, defined as much by its brainpower, flexible engineering competency and project management methods as by its state-of-the-art production areas and machinery, its site organization and its proven track record of successful implementations.

└ Geldof has built hundreds of small to medium-sized tank terminals and has multiple references for large-scale tank farms with capacities reaching 1,000,000 m³ and more

- This powerful organization has proven processes and procedures in place to guarantee the **on-time delivery of durable solutions using sustainable methods**. Indeed, safety, health and environment are the keystones of Geldof's policy.
- Geldof offers a **single point of contact** and provides **full scope services**. Customers are relieved of the task of dealing with myriad contacts and worries.

Geldof is a leading supplier of 'integrated steel solutions' for the storage, handling and processing of bulk solids, liquids and gases. We have a strong reputation in the fabrication of storage tank solutions, dry bulk storage and handling projects, pressure vessels and process equipment, and a range of other engineered solutions that often require a combination of high-level competencies in diverse technical areas.

Geldof has extensive expertise in renewable and conventional energy, storage and transshipment, and serves the oil and gas industries as well as a broad range of other industries.

Engicon nv (Geldof) is part of the **Engicon Group**.

└ Full scope tank farm with loading station

└ Full scope bio-ethanol tank terminal

└ Large, double-walled storage tanks for storing fuel

└ Large, double-walled storage tank with external floating roof

└ Stainless steel tank farm

└ Cryogenic double-walled ammonia storage tank
